

Introducing CurrentState.Online. CurrentState.Online is a cloud-based platform that empowers sustainability teams to plan, capture, manage and report ESG and sustainability related information, across an entire organization and in a single environment.

Challenges

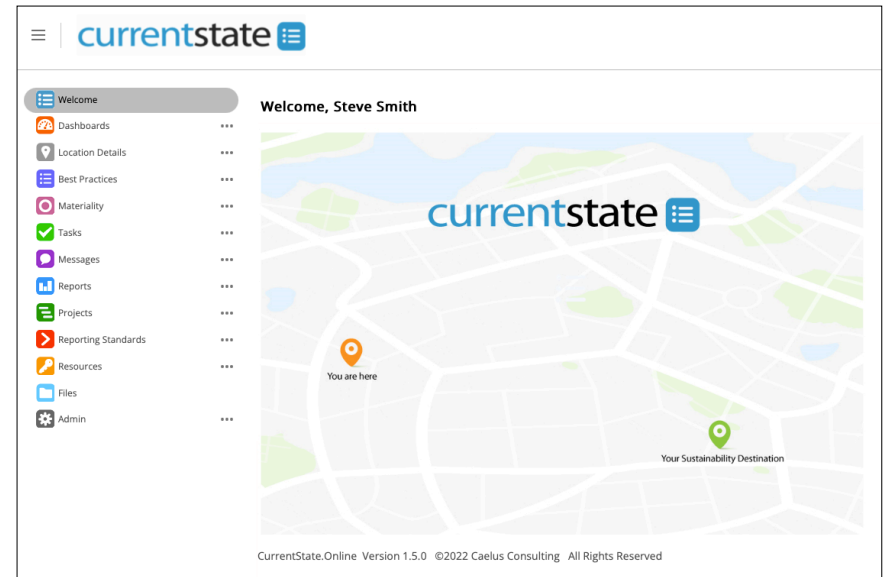

Below are some of the most common challenges organizations face when trying to establish or managing an existing sustainability program. Your organization:

- doesn't have a complete inventory of all your ESG activity
- has sustainability data spread across multiple networks, computers and physical locations
- doesn't have a clear and detailed plan to improve your ESG performance
- is being asked by vendors for sustainability data or to participate in sustainability reporting
- does not know what sustainability issues are material for your organization
- does not have a Project Management system dedicated to your sustainability program.
- is feeling pressure from stakeholders, clients, employees and the public to improve your sustainability

The Solution

CurrentState.Online solves all of these challenges, and more. Finally there is an online system, dedicated to the success of your sustainability program. Your entire sustainability team can be on the same page, regardless of location. The system has the following features:

- **Dashboard** - View all your critical sustainability performance data at a glance.
- **Location Details** - Repository for all your sustainability program details, organized by location and category.
- **Best Practices** - Database of over 1500 sustainability Best Practices, ready to be assigned to your program.
- **Materiality** - Materiality analysis tool that creates a variety of materiality reports in the standard heat-map format.

- **Tasks** - Powerful project management tool. Assign, track and update the status of your sustainability initiatives.
- **Messages** - Receive and send messages and task notifications, keeping the entire team connected.
- **Reports** - View, download and share real-time performance and task reports across all categories and locations. Have real-time ESG reports available 24/7 and only a click away.
- **Projects** - Export tasks to external project management platforms, such as MS Project, Monday and others.
- **Sustainability Standards** - Project management functionality for third-party standards, like the CDP, GRI, SASB and others.
- **Files** - Centralized repository for all files and documents for entire sustainability program.
- **Resources** - CurrentState™ demo and help center, as well as an extensive sustainability glossary.
