

## CurrentState™ ESG / Sustainability Assessment

The ESG / Sustainability Assessment (ESA) by CurrentState™ is the most comprehensive sustainability assessment in the market today. ESA examines over 1800 different sustainability Best Practices across over 20 sustainability business standards. The result is a Findings Report that gives an accurate snapshot of your current sustainability performance and a detailed roadmap how to improve it across your entire organization.

### The Process is Quick and Simple

The ESA can be completed in a matter of days. There is no more efficient method of conducting a complete audit of your sustainability policies, procedures and practices. Simply log in to your account, fill in the survey and within a couple days receive your Findings Report.

### Not Another 'Sustainability Reporting' Standard

Is your organization suffering from 'survey overload' from competing sustainability standards? You are not alone. This is how ESA is different.

- **ESA is completely customized to your business.** The assessment process includes excluding best practices that are not appropriate for your business. Only practices that are material remain and are part of your plan.
- **ESA is not industry specific.** Unlike sustainability reporting standards, ESA only covers your Core Operational Sustainability. Industry specific sustainability metrics and KPIs are only appropriate to add after your core sustainability has been established.
- **Be better prepared to participate in sustainability reporting standards.** Once your core sustainability has been established, standards such as the GRI, CDP, SASB, UNSDG and others will take far less time and resources to participate in.

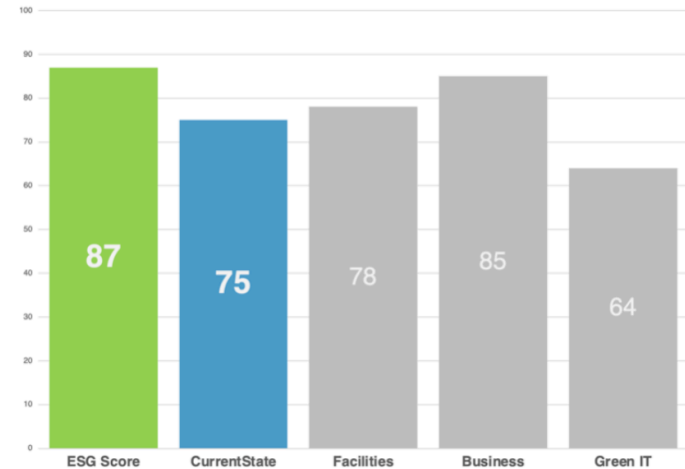

### Findings Report

The Findings Report contains a wealth of critical sustainability performance data. This includes:

- Sustainability performance scores for over 20 different sustainability business categories.

### ACME Company - 2022 ESG Rating Score

87

ACME Company - August 2022 CONFIDENTIAL

currentstate 

- Boardroom-ready summary charts and graphs to illustrate your story to stakeholders, employees, clients and the public.
- Gaps and opportunities in existing sustainability programs.
- Comprehensive roadmap how to improve sustainability performance across the entire organization.

### Materiality and ESG Ratings Included

There is no need to spend tens of thousands of extra dollars for separate Materiality reports and ESG Ratings. Both of these can be included in the standard Findings Report. Once you receive your report, you will have all the information you need to create a world-class sustainability program.
